SPADE Universal Data Optimizer - sample document page 1
1. Data optimisation is the practice of reducing the cost of storing and moving information without losin
2. Data optimisation is the practice of reducing the cost of storing and moving information without losin
3. Data optimisation is the practice of reducing the cost of storing and moving information without losin
4. Data optimisation is the practice of reducing the cost of storing and moving information without losin
5. Data optimisation is the practice of reducing the cost of storing and moving information without losin
6. Data optimisation is the practice of reducing the cost of storing and moving information without losin
7. Data optimisation is the practice of reducing the cost of storing and moving information without losin
8. Data optimisation is the practice of reducing the cost of storing and moving information without losin
9. Data optimisation is the practice of reducing the cost of storing and moving information without losin
10. Data optimisation is the practice of reducing the cost of storing and moving information without losi
11. Data optimisation is the practice of reducing the cost of storing and moving information without losi
12. Data optimisation is the practice of reducing the cost of storing and moving information without losi
13. Data optimisation is the practice of reducing the cost of storing and moving information without losi
14. Data optimisation is the practice of reducing the cost of storing and moving information without losi
15. Data optimisation is the practice of reducing the cost of storing and moving information without losi
16. Data optimisation is the practice of reducing the cost of storing and moving information without losi
17. Data optimisation is the practice of reducing the cost of storing and moving information without losi
18. Data optimisation is the practice of reducing the cost of storing and moving information without losi

SPADE Universal Data Optimizer - sample document page 2
1. Data optimisation is the practice of reducing the cost of storing and moving information without losin
2. Data optimisation is the practice of reducing the cost of storing and moving information without losin
3. Data optimisation is the practice of reducing the cost of storing and moving information without losin
4. Data optimisation is the practice of reducing the cost of storing and moving information without losin
5. Data optimisation is the practice of reducing the cost of storing and moving information without losin
6. Data optimisation is the practice of reducing the cost of storing and moving information without losin
7. Data optimisation is the practice of reducing the cost of storing and moving information without losin
8. Data optimisation is the practice of reducing the cost of storing and moving information without losin
9. Data optimisation is the practice of reducing the cost of storing and moving information without losin
10. Data optimisation is the practice of reducing the cost of storing and moving information without losi
11. Data optimisation is the practice of reducing the cost of storing and moving information without losi
12. Data optimisation is the practice of reducing the cost of storing and moving information without losi
13. Data optimisation is the practice of reducing the cost of storing and moving information without losi
14. Data optimisation is the practice of reducing the cost of storing and moving information without losi
15. Data optimisation is the practice of reducing the cost of storing and moving information without losi
16. Data optimisation is the practice of reducing the cost of storing and moving information without losi
17. Data optimisation is the practice of reducing the cost of storing and moving information without losi
18. Data optimisation is the practice of reducing the cost of storing and moving information without losi

SPADE Universal Data Optimizer - sample document page 3
1. Data optimisation is the practice of reducing the cost of storing and moving information without losin
2. Data optimisation is the practice of reducing the cost of storing and moving information without losin
3. Data optimisation is the practice of reducing the cost of storing and moving information without losin
4. Data optimisation is the practice of reducing the cost of storing and moving information without losin
5. Data optimisation is the practice of reducing the cost of storing and moving information without losin
6. Data optimisation is the practice of reducing the cost of storing and moving information without losin
7. Data optimisation is the practice of reducing the cost of storing and moving information without losin
8. Data optimisation is the practice of reducing the cost of storing and moving information without losin
9. Data optimisation is the practice of reducing the cost of storing and moving information without losin
10. Data optimisation is the practice of reducing the cost of storing and moving information without losi
11. Data optimisation is the practice of reducing the cost of storing and moving information without losi
12. Data optimisation is the practice of reducing the cost of storing and moving information without losi
13. Data optimisation is the practice of reducing the cost of storing and moving information without losi
14. Data optimisation is the practice of reducing the cost of storing and moving information without losi
15. Data optimisation is the practice of reducing the cost of storing and moving information without losi
16. Data optimisation is the practice of reducing the cost of storing and moving information without losi
17. Data optimisation is the practice of reducing the cost of storing and moving information without losi
18. Data optimisation is the practice of reducing the cost of storing and moving information without losi

SPADE Universal Data Optimizer - sample document page 4
1. Data optimisation is the practice of reducing the cost of storing and moving information without losin
2. Data optimisation is the practice of reducing the cost of storing and moving information without losin
3. Data optimisation is the practice of reducing the cost of storing and moving information without losin
4. Data optimisation is the practice of reducing the cost of storing and moving information without losin
5. Data optimisation is the practice of reducing the cost of storing and moving information without losin
6. Data optimisation is the practice of reducing the cost of storing and moving information without losin
7. Data optimisation is the practice of reducing the cost of storing and moving information without losin
8. Data optimisation is the practice of reducing the cost of storing and moving information without losin
9. Data optimisation is the practice of reducing the cost of storing and moving information without losin
10. Data optimisation is the practice of reducing the cost of storing and moving information without losi
11. Data optimisation is the practice of reducing the cost of storing and moving information without losi
12. Data optimisation is the practice of reducing the cost of storing and moving information without losi
13. Data optimisation is the practice of reducing the cost of storing and moving information without losi
14. Data optimisation is the practice of reducing the cost of storing and moving information without losi
15. Data optimisation is the practice of reducing the cost of storing and moving information without losi
16. Data optimisation is the practice of reducing the cost of storing and moving information without losi
17. Data optimisation is the practice of reducing the cost of storing and moving information without losi
18. Data optimisation is the practice of reducing the cost of storing and moving information without losi

SPADE Universal Data Optimizer - sample document page 5
1. Data optimisation is the practice of reducing the cost of storing and moving information without losin
2. Data optimisation is the practice of reducing the cost of storing and moving information without losin
3. Data optimisation is the practice of reducing the cost of storing and moving information without losin
4. Data optimisation is the practice of reducing the cost of storing and moving information without losin
5. Data optimisation is the practice of reducing the cost of storing and moving information without losin
6. Data optimisation is the practice of reducing the cost of storing and moving information without losin
7. Data optimisation is the practice of reducing the cost of storing and moving information without losin
8. Data optimisation is the practice of reducing the cost of storing and moving information without losin
9. Data optimisation is the practice of reducing the cost of storing and moving information without losin
10. Data optimisation is the practice of reducing the cost of storing and moving information without losi
11. Data optimisation is the practice of reducing the cost of storing and moving information without losi
12. Data optimisation is the practice of reducing the cost of storing and moving information without losi
13. Data optimisation is the practice of reducing the cost of storing and moving information without losi
14. Data optimisation is the practice of reducing the cost of storing and moving information without losi
15. Data optimisation is the practice of reducing the cost of storing and moving information without losi
16. Data optimisation is the practice of reducing the cost of storing and moving information without losi
17. Data optimisation is the practice of reducing the cost of storing and moving information without losi
18. Data optimisation is the practice of reducing the cost of storing and moving information without losi

SPADE Universal Data Optimizer - sample document page 6
1. Data optimisation is the practice of reducing the cost of storing and moving information without losin
2. Data optimisation is the practice of reducing the cost of storing and moving information without losin
3. Data optimisation is the practice of reducing the cost of storing and moving information without losin
4. Data optimisation is the practice of reducing the cost of storing and moving information without losin
5. Data optimisation is the practice of reducing the cost of storing and moving information without losin
6. Data optimisation is the practice of reducing the cost of storing and moving information without losin
7. Data optimisation is the practice of reducing the cost of storing and moving information without losin
8. Data optimisation is the practice of reducing the cost of storing and moving information without losin
9. Data optimisation is the practice of reducing the cost of storing and moving information without losin
10. Data optimisation is the practice of reducing the cost of storing and moving information without losi
11. Data optimisation is the practice of reducing the cost of storing and moving information without losi
12. Data optimisation is the practice of reducing the cost of storing and moving information without losi
13. Data optimisation is the practice of reducing the cost of storing and moving information without losi
14. Data optimisation is the practice of reducing the cost of storing and moving information without losi
15. Data optimisation is the practice of reducing the cost of storing and moving information without losi
16. Data optimisation is the practice of reducing the cost of storing and moving information without losi
17. Data optimisation is the practice of reducing the cost of storing and moving information without losi
18. Data optimisation is the practice of reducing the cost of storing and moving information without losi
